GENERAL INFORMATION ABOUT FANS

We produce the following types of high capacity fans; 22", 26", 30", 50" also american type cone and mobile shutter fans. Beside our fans, shutters and blades are produced according to customer's request. Fan shutters sets can be easily assembled and disassembled. It is suitable for the cleaning of the fan inside that the shutter sets are mobile. Slant fans are produced with 5 degree inclination, which are designed especially for easier montage. The surface of shutters is designed to promote smooth and turbulence free air passage allowing moisture run out of the building. The slant design protects the motor and drives from stormy water.

TYPES OF FANS ACCORDING TO THE BLADE MATERIAL

A- THE BODY MATERIAL

The body of axial fan is made of galvanized sheet iron.

B- BLADES

We produce the blades from special aluminium alloy, stainless steel or galvanized sheet. The blades have special geometry to obtain high efficiency.

1- Aluminium Blades:

These blades are produced from special aluminium alloy. Thickness is 2 mm. The blades have special curvature to increase the strength and efficiency.

2- Stainless Steel Blades:

These blades are produced from either 304 quality stainless steel, or 430 quality stainless steel depending on customer's choice. Thickness is 1 mm. The blades have special curvature to increase the strength and efficiency.

3- Galvanized Sheet Blades:

These blades are produced from galvanized sheet. Thickness is 1 mm. The blades have special curvature to increase the strength and efficiency.

WE EXPORT More Than
100 COUNTRIES
